DID YOU KNOW

- * The most common causes of vision loss among the elderly are age-related macular degeneration, glaucoma, cataract, and diabetic retinopathy.
- * Approximately one person in three has some form of vision-reducing eye disease by the age of 65.
- * Annual eye exams can detect serious health conditions such as diabetes, high blood pressure, high cholesterol, and even cancer.
- * The aging cornea and lens in the eye become less clear as we age, causing light to scatter inside the eye, which increases glare.
